I'm taking the time to send my comments because this is a service that I elected to pay for. It should be an option not a demand on what should or should not be available. The National Association of Broadcasters should not be in a position to dictate what I (we) can or cannot listen to. I choose to pay for Satellite Radio because it's services and variety are of a quality that I could not receive from regular radio. If I knew in advance that it would be monitored or dictated what is available (instead of allowing me to turn the station to another if it becomes offensive or not what I care to listen to at the time) I would not have chosen to pay for the service. Whatever happen to the freedom of chose we had here in the states. I urge you, the FCC, to please reject the NAB's petition 04 - 160 and to please support XM's ability to provide the quality service I should have the option of having if I'm paying for the service.
